📍 Brasília, Brazil (Open to remote)

Summary

Senior Software Engineer with 10+ years building user-facing products at the intersection of engineering, product, and design, turning complex requirements into intuitive, high-performance interfaces. Proven track record owning front-end architecture, leading cross-functional initiatives, and delivering React/TypeScript solutions that power complex interactions across web and mobile. Experienced as a Tech Lead, partnering closely with product and design teams, mentoring engineers, and driving architectural decisions that improve engineering quality, developer experience, and product delivery.

Highlights

- Engineering × Product × Design
- Technical Leadership & Mentorship
- Architecture & Platform Development
- AI-native Engineering
- Developer Experience & Quality
- User Experience & Design Systems

Tech Stack

Front-end: React, Next.js, TypeScript, React Native, Redux, Vue, Design Systems, Accessibility, Performance Optimization
Back-end: Node.js, Python
AI: Claude Code, Cursor, MCP, Prompt Engineering, Agent Workflows, AI-assisted Development
Cloud & Data: AWS, PostgreSQL, Redis, DynamoDB, MongoDB, GraphQL

Experience

Senior Software Engineer @ Appcues (Remote)

April 2022 / Present

- AI-native development:
 - Use Cursor daily to explore unfamiliar codebases, generate implementation plans, accelerate refactoring, and improve automated test coverage.
 - Design prompt-driven agent workflows and MCP integrations powering user-facing AI experiences.
 - Leverage AI during code reviews to surface edge cases, accessibility concerns, and architectural trade-offs before implementation.
 - Use AI to accelerate documentation, debugging, and technical investigations while maintaining engineering quality through manual validation.
- Designed and evolved agent tooling and prompt-driven workflows powering user-facing AI experiences, defining agent capabilities, interaction patterns, and integration points across the product.
- Helped build a new mobile onboarding product from the ground up, working through ambiguous product requirements alongside design and product teams. The launch contributed to acquiring 100+ customers in its first year.
- Led a key part of the Flows builder rewrite (a no-code web + Chrome-extension platform for creating and previewing interactive flows directly on customers' websites), increasing flexibility and enabling advanced multi-step user journeys.
- Designed and developed core SDK capabilities powering in-app experience delivery (rendering, user identification, targeting, and event tracking) serving 20,000+ weekly active users.
- Shipped multi-channel messaging (email + push), improving user engagement by 10%
- Led the evolution of the shared design system used across multiple products, collaborating closely with designers in Figma to improve consistency, accessibility, component APIs, and development velocity, reducing time-to-ship by 70%.

Tech Lead / Senior Software Engineer @ Arctouch (Remote)

Sep 2021 / Mar 2022

- Led a team of 5 developers delivering HP Print At Your Service, a web platform for managing printer subscriptions (device sync, usage tracking, ink/toner monitoring).
- Defined system architecture and technical direction for Tempo Platform (Eli Lilly), a personalized diabetes management website for patients and healthcare professionals.
- Stayed hands-on in critical parts of the codebase, establishing review and testing practices that reduced regressions and improved release stability

Senior Software Engineer @ Syngenta (Remote)

May 2020 / Aug 2021

- Selected to join the sugarcane cultivation team for Cropwise Protector, an agricultural monitoring platform with geospatial tracking, team performance analytics, and pest management.
- Optimized rendering of complex dashboards with large volumes of geospatial data, cutting load time from ~50s to ~5s via query optimization, state restructuring with React Context, and memoization to reduce re-renders, improving the experience for field users
- Delivered usability and performance-focused dashboard features while reducing technical debt through unit and integration tests

Tech Lead / Senior Software Engineer @ Stefanini (Hybrid)

Jan 2019 / Apr 2020

- Led the architecture of enterprise mobile applications across BDMG (contract management and document validation), KIM+ (payments, transfers, promotions, and public transportation integration), and Spark (white-label financial services), ensuring scalability, availability, and compliance.
- Owned UI/UX proposals and validation, improving usability and aligning interfaces with product requirements
- Established front-end and back-end architecture standards that streamlined onboarding for new developers across multi-client projects

Mid Software Engineer @ Smart Sense Lab - DCC/UFG

Oct 2018 / Jan 2019

- Built full-stack, AI-integrated applications including Sense Cam (centralized monitoring of multiple camera feeds in a single interface) and Sense Face Recognition (matching historical and real-time images for identification)
- Integrated front-end systems with AI algorithms for real-time processing and intelligent features

Mid Software Engineer @ Hekima

Jun 2017 / Oct 2018

- Built and maintained the front-end of Simplicidata, an AI-powered platform enabling complex, customizable data transformations
- Improved system stability by shipping new features, reducing technical debt, and adding unit test coverage
- Contributed to back-end data-processing workflows using functional programming (Scala)

Education

Bachelor's in Computer Engineering

CEFET-MG · 2011 / 2016

Languages
